

The Atlas of Nowhere

Charles Fort called it the Super-Sargasso Sea, named after the mysterious Sargasso Sea; the dimension into which lost things go. Amelia Earhart's over at the bar. The Lost Colony of Roanoke is next door. USS Cyclops? In the harbor. Elvis Presley? Who do you think is on stage? The Dead Sea Scrolls? Have a pamphlet. And everybody has all the socks they could possibly need. Just not matched ones. Sometimes, even abstract concepts can wind up here — someone's temper or their wits, or even hope.

Introduction

How to enter, and, more importantly, how to leave. Basic information about the terrain is also covered.

-  Reinforced Starmetal

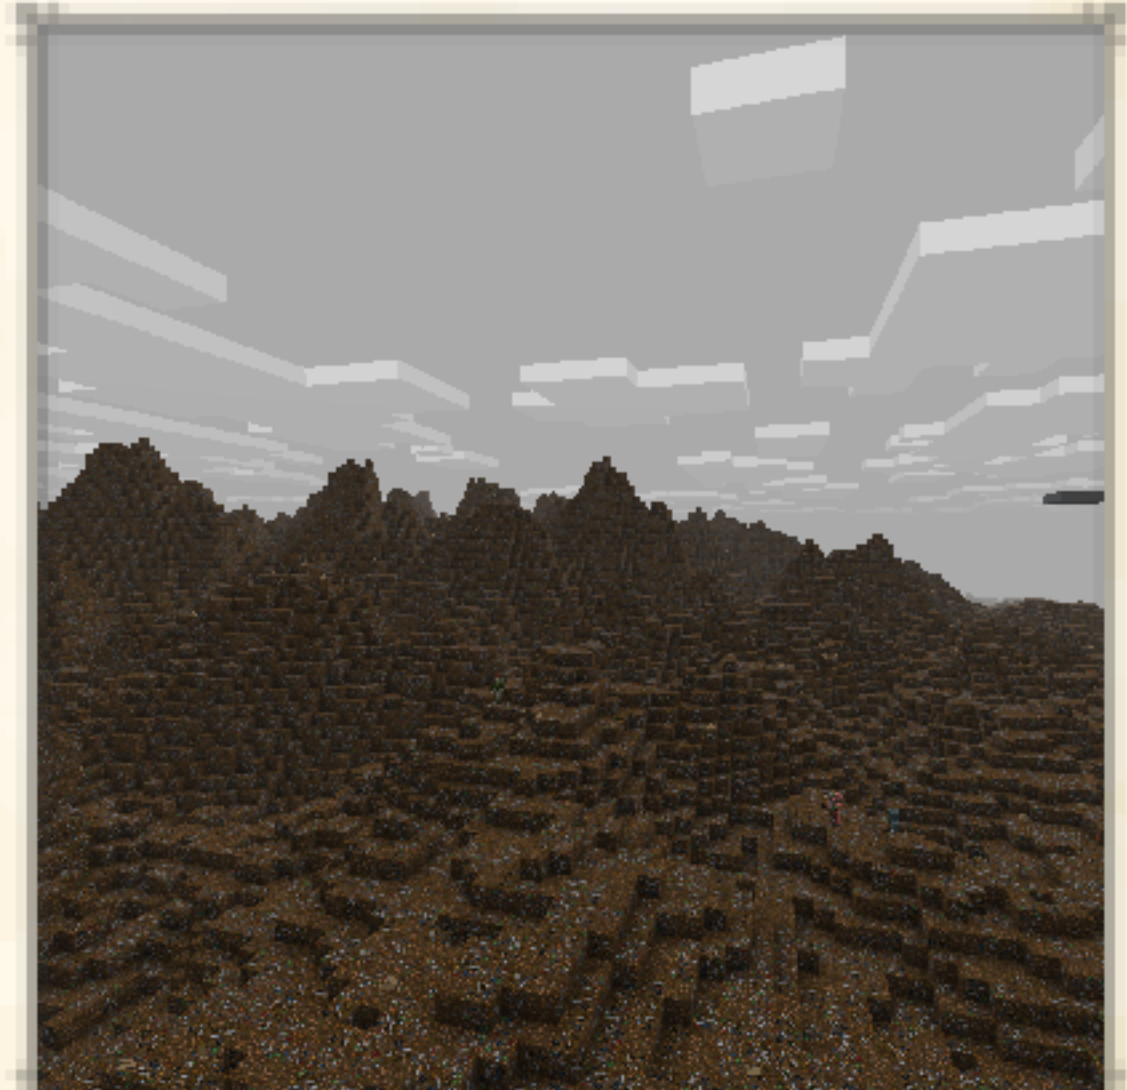

Entering

More often than not, the path to this dimension is found accidentally. Falling out of the world, or perhaps, encountering a space where reality is a bit thinner can land you here.

Flotsam

Every item that's ever been lost ends up here. Destroyed items, like those tossed in lava, not so much. Digging through the mountains of flotsam, one can find anything - eventually. Different biomes seem to host different kinds of items.

Leaving

Though there may be other ways out, this book only knows of one method. You must travel back to the Overworld via the Nether. Previous travellers have left behind ruined portals you may be able to repair.

Petrified Flotsam

Just below the surface, flotsam begins to compact and solidify into a stone-like material. Attempting to scavenge this material is a futile effort.

Compacting

Flotsam can be petrified at a 9:1 ratio

Rich Petrified Flotsam

Sometimes, small metal objects may survive petrification. These can be mined out, and smelted down to recover the original metals

Junk Items

These items also function as a sort of currency amongst the traders who call this dimension home.

Recycling

Recycling (cont.)

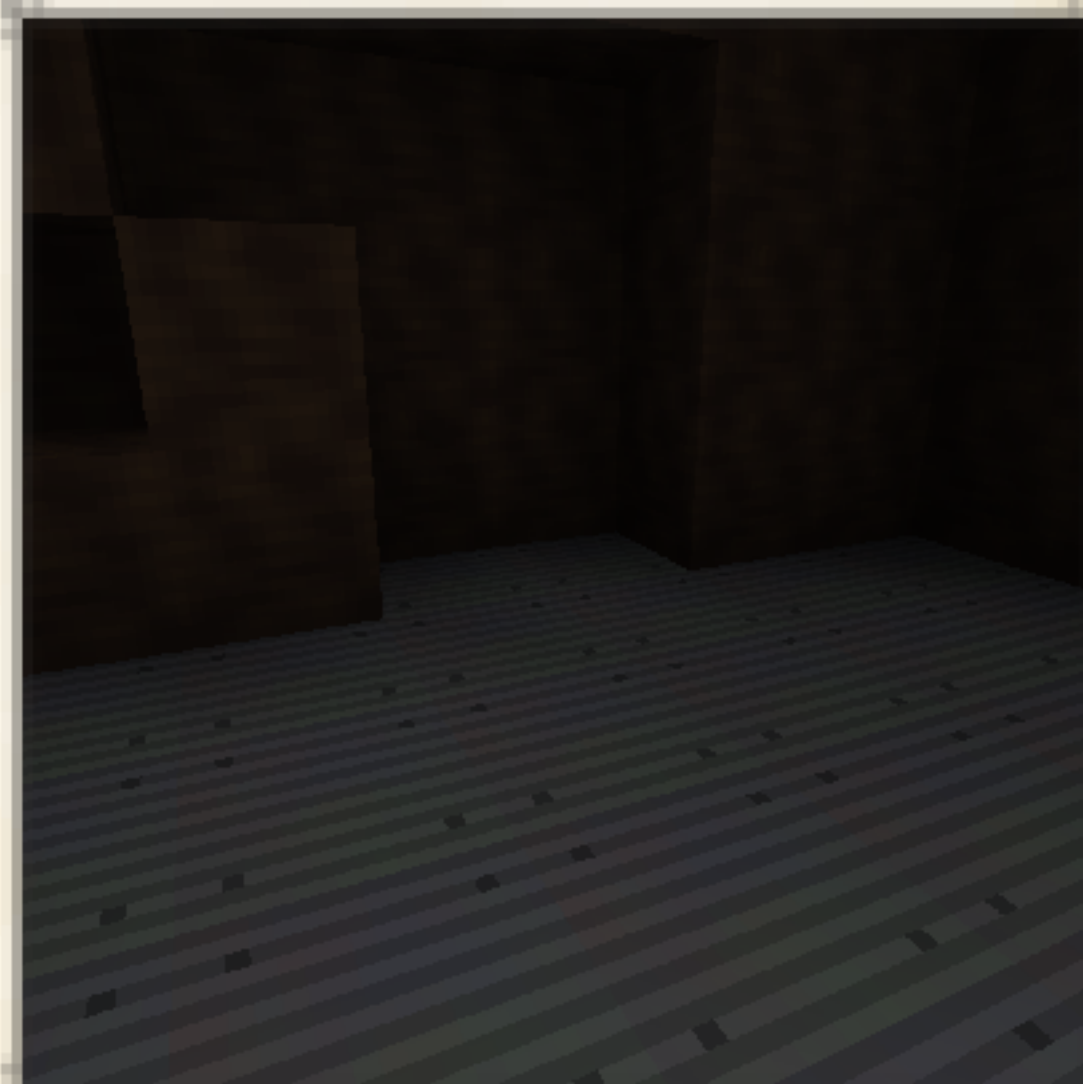

Junk materials can be smelted down to recover raw metals.

Reinforced Starnetal

The bottom of this dimension is an endless expanse of impenetrable metal. Is there some kind of machine beneath? Is this place artificial?

Structures & Points of Interest

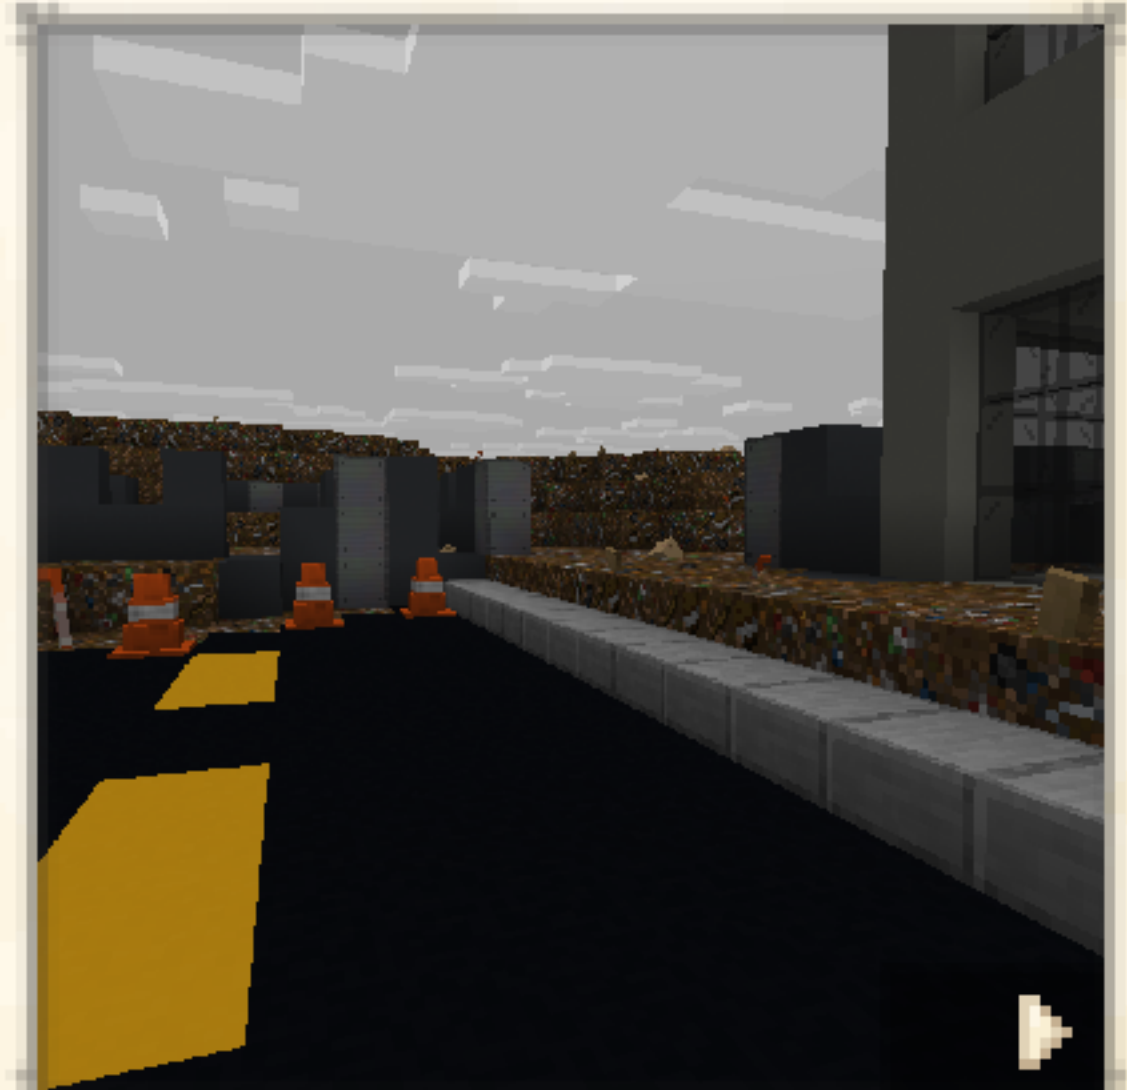

Various structures have either been built here, or have been pulled here by whatever forces are at work.

Entries

-  Office Buildings
-  Bazaars
-  Portals
-  Castles
-  Shipwrecks
-  Sky Dungeons
-  Abandoned Structures

Office Buildings

Packed to the brim with zombies. Strongly suggested that one brings weapons that can affect many enemies at once.

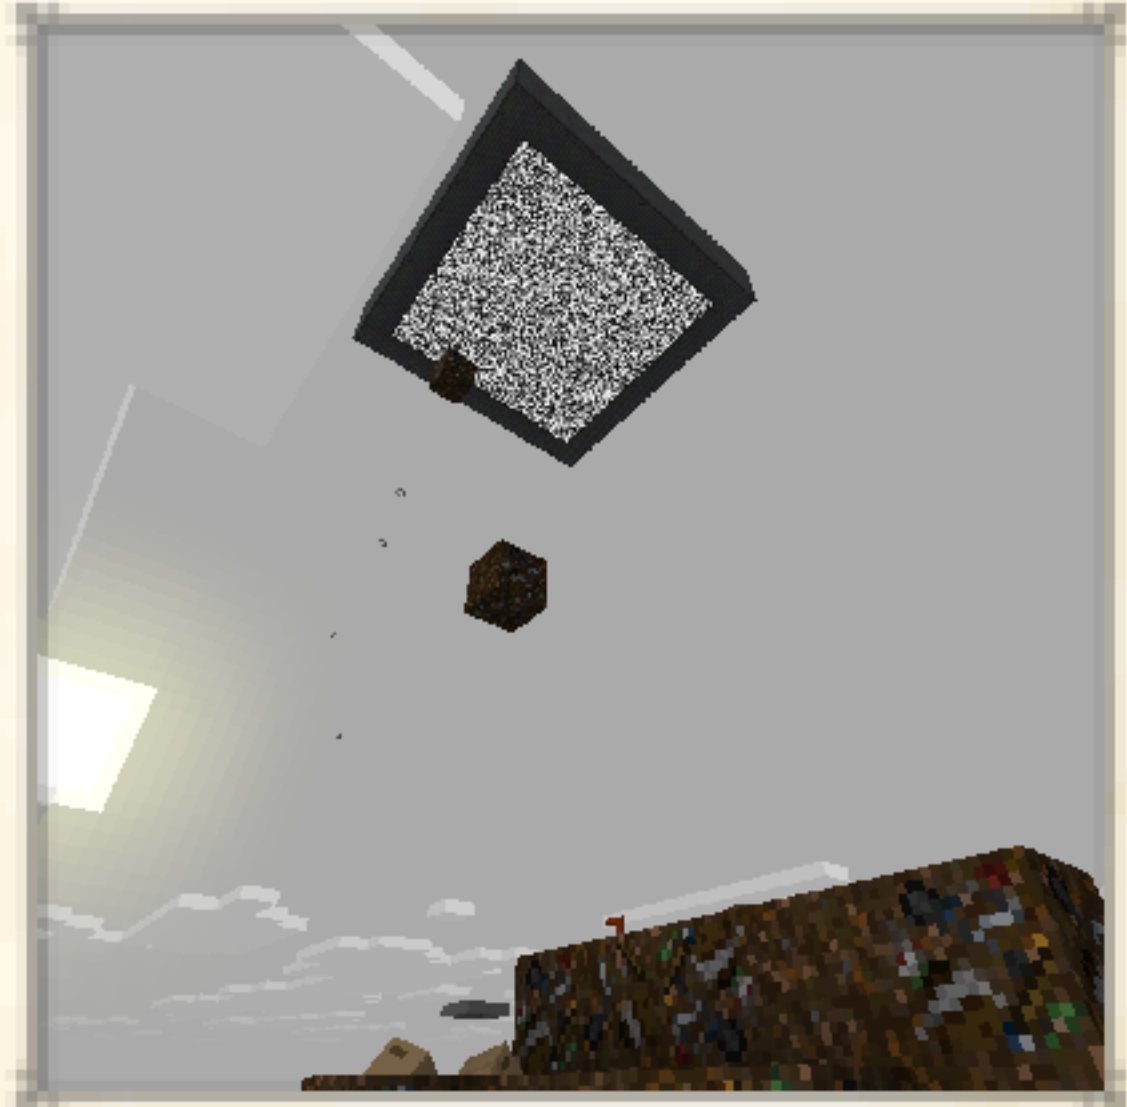

Bazaars

Relatively safe havens where wandering traders gather. They seem unable to agree on a single currency - each trader favours a different kind of junk.

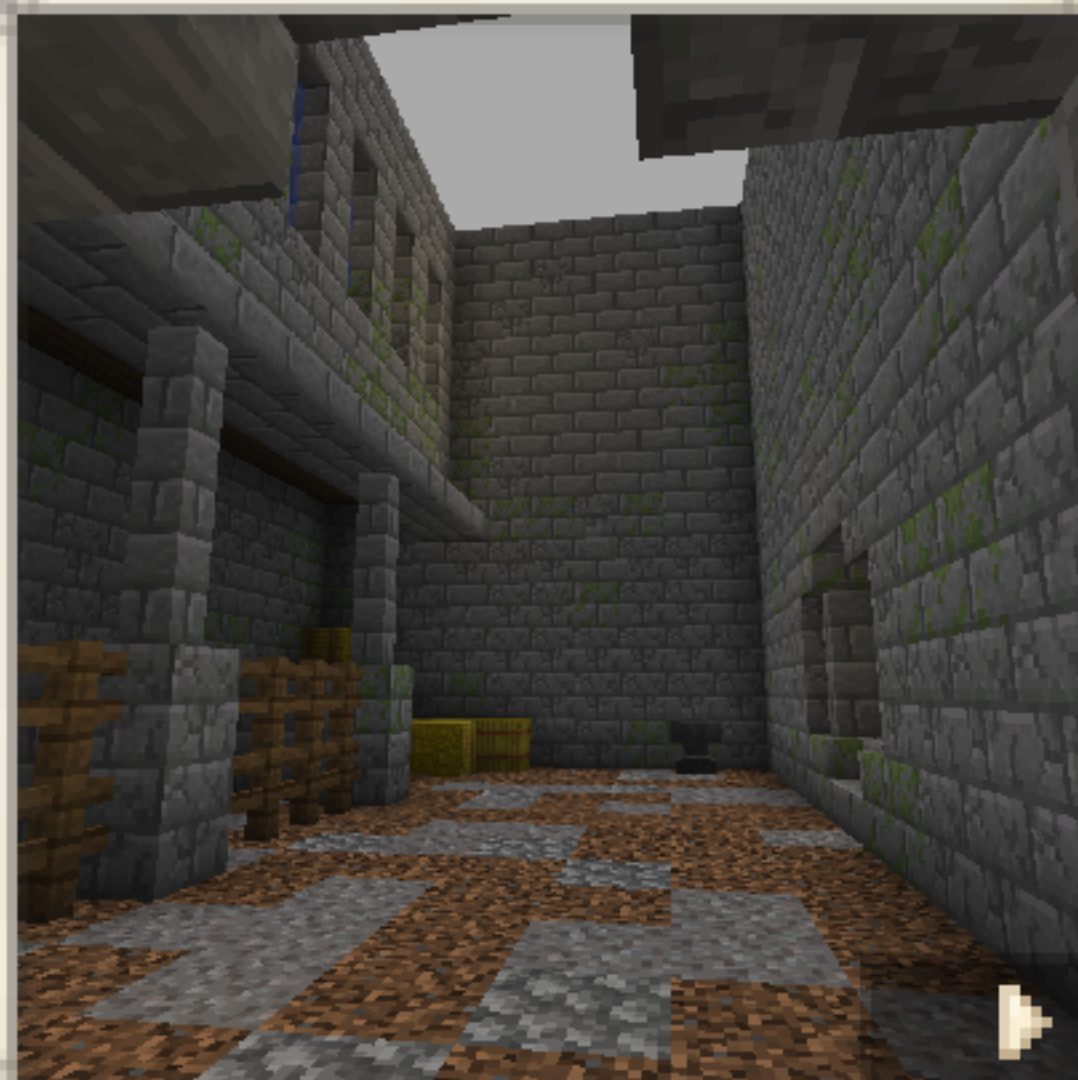

Portals

These portals bring new junk into the dimension. Standing beneath one is risky, but, if one wished to harvest flotsam on an industrial scale, setting up a factory beneath one would be wise.

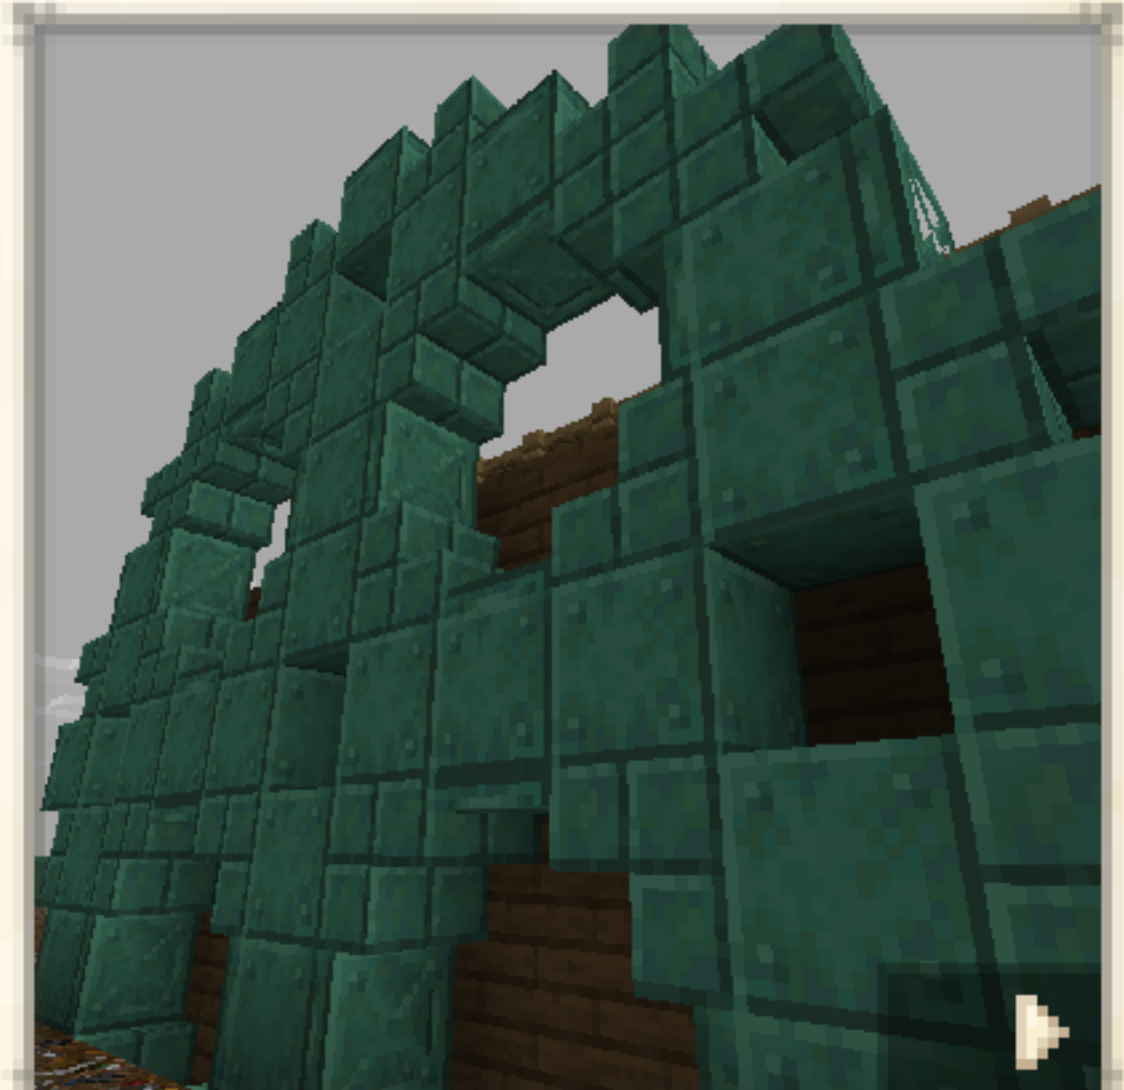

Castles

Pillagers have taken over and infested this structure. The lab on the second floor contains some interesting gadgets.

Shipwrecks

These wrecks must have been here a long time - they are buried deep. The hold is on the very lowest deck.

Sky Dungeons

It's unclear what force holds these structures aloft, but, they are filled with trial spawners. The pathways are twisted in strange directions. Ender pearls and a ranged weapon are recommended.

Abandoned Structures

Various uninhabited structures and ruins dot the landscape. What could they be?

Curiosities

Things you may find.
Some are useful, some
are not. Many of them
are not craftable –
exploration is the only
method to obtain them.

-  Studded Leather Armor

 Chronometric Flux Toaster

 Redstone Pulse Device

 Hammer

 Starmetal

 Shrink Ray

 Growth Ray

 Everlasting Meats

 Juice that makes your head explode

Batteries

This item can supply power to items in the inventory, but, once it's out of charge, it's useless

Rechargeable AA Battery

There are rechargeable variants. It can be recharged with [Potato Batteries](#)

Bedrock Crean

This cream can be smeared on bedrock to make it softer. It's still hard to mine, but no longer impossible. The resulting slop can be made into a very hearty bread.

Breadrock

The slop can be eaten raw, but it's better baked into bread

Fox Ears

Wearing these seems to earn the trust of wild foxes. They can be dyed, and combined with armor.

Fox Ears

Leather Cap

Lightning Bottle

This impossible somehow contains a lightning bolt. Caution is advised when throwing it.

Bottle o' Spiders

A bottle of spiders.
Throw them FAR away.

Potato Battery

Not particularly appetizing, and tastes strongly of copper. Eating it allows the body to produce a small amount of electrical energy. Items in the player's inventory will be recharged. The Personal Voltmeter can be used to check the current power level.

Potato Battery

Personal Voltmeter

Pylon

This item makes pretty poor armour. Using it to obscure the eyes of a humanoid monster results in near total pacification.

Example

You can slip it on a mob's head by using the item on them

Shock Therapist

A device that periodically spews chunks of metal, and then creates arcs of electricity. Best not approached. Requires Forge Energy to be supplied to the underside, and has an idle/active cycle.

Studded Leather Armor

A minor upgrade to leather armor. It retains the thermal properties of leather, while being slightly more durable. Can be made by applying the proper upgrade template to leather armor in a smithing table.

Example

Studded leather, as it looks when worn.

Chronometric Flux Toaster

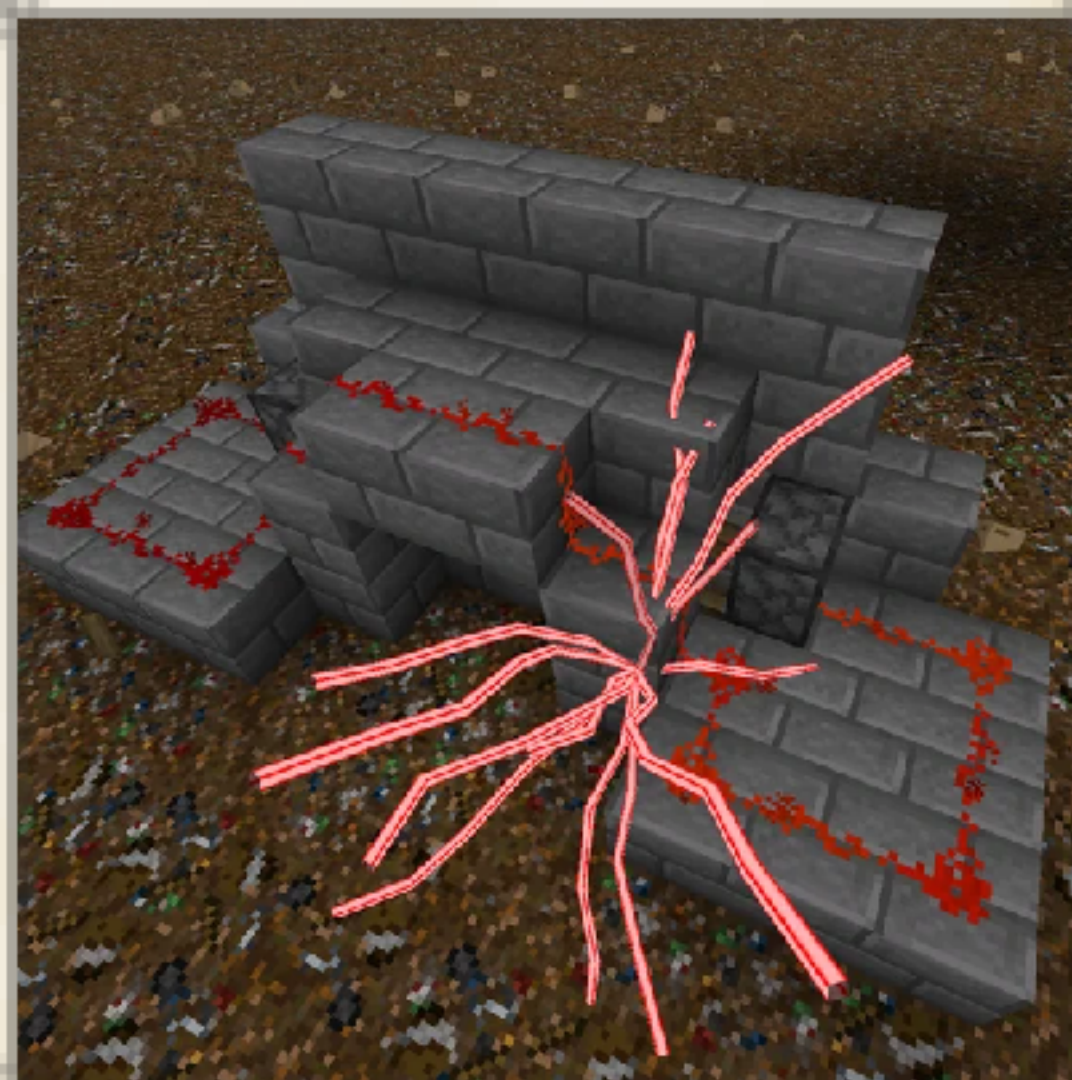

This device possesses a function that can't possibly be useful to anyone. Using the principals of chronometric science, it toasts bread after it's been eaten. It somehow does this despite having no discernible power source.

Warning: do NOT take a bath with this item.

Redstone Pulse Device

This item, when thrown, emits a pulse that temporarily disrupts the normal functioning of redstone apparatus. Caution should be used, as not all redstone contraptions respond well to such disruption.

Hammer

A heavy hammer. Slow, but can deal heavy damage to a single foe. When thrown, it can strike many enemies in its path.

Crafting

It would be easier to simply find one – but if it must be crafted, it can be.

Starmetal

A metal unlike any other. Impossibly strong, yet lightweight. The composition is unknown - thankfully, there's plenty around for scavenging.

Recycling

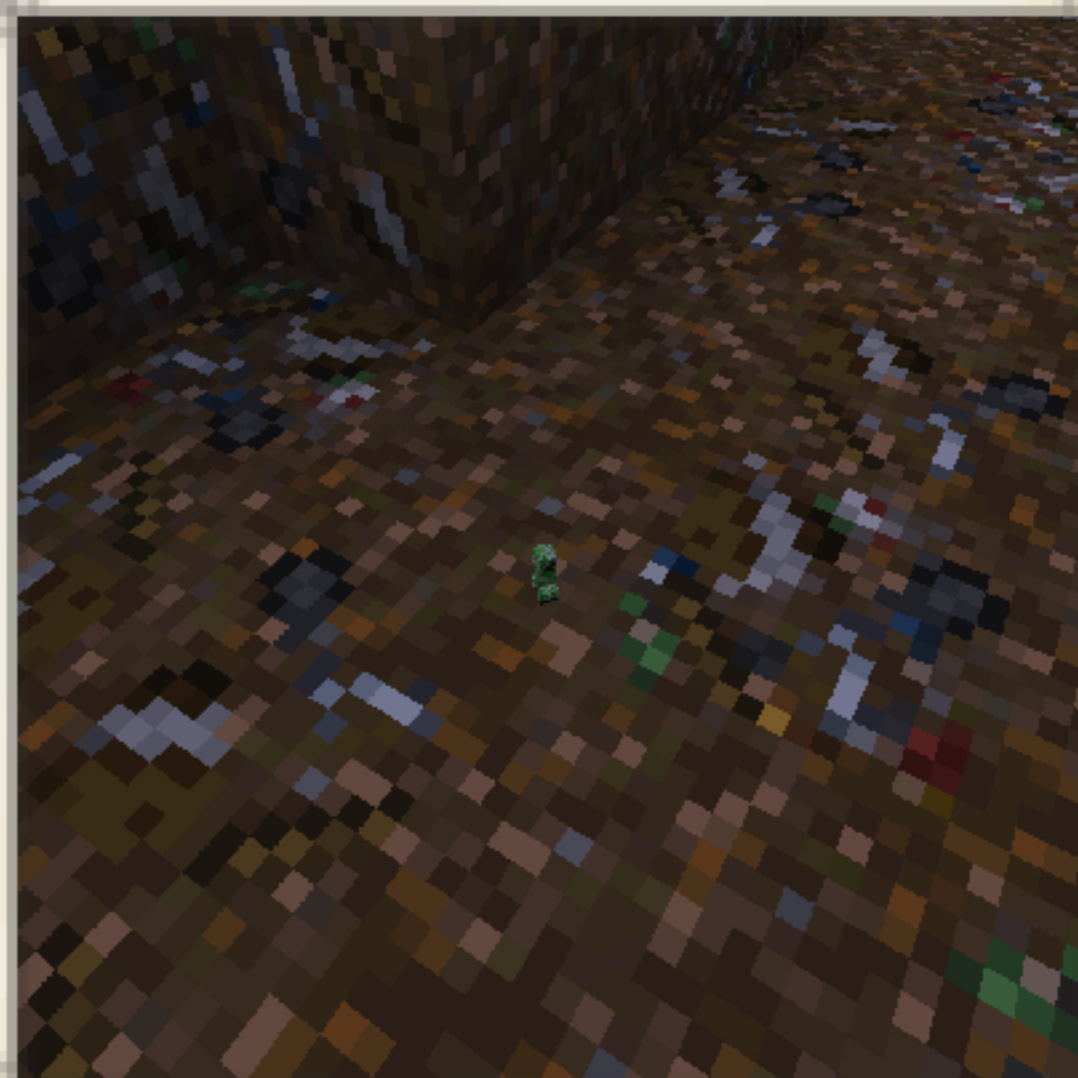

Scraps can be reforged into new ingots in a blast furnace.

Shrink Ray

A gun that shrinks things. Doesn't seem to make creatures stronger or weaker - just, smaller. Batteries not included

Growth Ray

A gun that embiggens things. Doesn't seem to make creatures stronger or weaker - just, larger. Batteries not included

Everlasting Meats

No matter how long these meats are consumed, they never loses mass. However, they will never fully sate one's hunger, and one will find themselves hungry again shortly.

A thoroughly cursed set of items. Consume at your own risk.

Juice that makes your head explode

Brewed by adding TNT to a potion, this stuff will cause one's head to explode. Probably more useful as a splash potion, or tipped arrow.
